

# Acoustics simplified

Synonymous with quality, **Woodfit Acoustics** manufactures and provides acoustics solutions that are essentially wood based, but so much more than just wood.

Woodfit deals with each project individually, offering expert advice and assistance.

**V**ersatile, attractive and sturdy enough to withstand the most severe climatic conditions, wood is being used in an increasing number of projects throughout the world.

Since 1979, Woodfit Acoustics has been providing specialist joinery to the market. Woodfit provides and specialises in the manufacture of custom-made interior architecture acoustic wall and ceiling panels, wall and ceiling systems, and bespoke joinery. Woodfit has found a true balance between handcraft and industry, experience and planning,

nature and technology, which has allowed it to grow and develop its product, offering architects a truly individual service. Although Woodfit's product is essentially wood based, it can offer acoustic panelling in almost any finish including real wood veneer, solid wood, laminate and painted colours, fabric and leather. It provides a wide variety of customised and standard finishes, but what makes Woodfit unique is how it deals with each project individually, offering expert advice and assistance, and tailoring a product to meet clients' exact requirements.

Woodfit's team is committed to understanding client requirements. Through investment in research and development, Woodfit Acoustics pushes boundaries and develops solutions that meet the design needs of architects and designers. Woodfit brings a fresh and innovative approach to consultants, designers and architects with its in-house acoustic technicians, who can help implement innovative concepts, whether basic or intricate.

Elegant, simple and lightweight, installation of the Woodfit product is easy, and it can be fixed to walls and ceilings. The service also includes technical acoustic assessments, auto CAD drawings, 3D imaging, estimating, turnkey solutions, home cinema solutions and bespoke joinery.

This allows architects and designers the flexibility of having the full project solution offered under one roof.

Woodfit's excellence and quality has been recognised by receipt of various awards. The most notable include being an accredited finalist at WAF 2009 for Wexford Opera House, Ireland; the Opus Timber Award 2006 for The Marine Institute Headquarters, Co. Galway, Ireland; and the Irish Joinery of the Year 2003 Award for The Helix, Mahony Hall, DCU, Ireland.

The company's approach to each project is unique, and with each new project bringing new challenges, Woodfit is on hand to offer all the required technical and practical support for projects, which could

Woodfit's acoustic panelling is available in almost any finish, including real wood veneer and painted colours.

be as wide ranging as a corporate boardroom with matching furniture, right up to the most intricate auditoria or theatre.

Woodfit Acoustic panels are manufactured at its facility in Ireland, from sustainably sourced timber. They have been fitted around the world in commercial buildings, such as universities and hotels, in government buildings and in the private sector. ●
